

Bird list for Anegada Version 6: 13th December 2004

Although we have yet to fully implement our bird census protocol we thought it would be useful to provide an index of the chances of seeing a given species from our sightings on trips to date. We decided to follow the criteria for probability of sighting used in *Birds of the West Indies*, by H. Raffaele, J. Wiley, O. Garrido, A. Keith & J. Raffaele, and is as follows:

Common (C) = 5 or more individuals seen daily
 Fairly common (FC) = 1 to 4 individuals seen daily
 Uncommon (UC) = Not every trip but at least twice per year
 rare (R) = less than 2 records per year
 very rare (VR) = Once every 5 to 10 years
 vagrant (V) = less than once every 10 years

This does not in anyway reflect the abundance of the species concerned because some species are far more difficult to detect than others. We will update the list after each field trip and add in additional criteria such as breeding status. **New additions to the list are highlighted in red.**

Bird Family	Common Name	Scientific Name	Location	Observational Status	Confirmed breeding
