

PROJECT OUTPUTS

During the fund-raising for this project we outlined that we would generate a great deal of information which would be translated into a wide range of outputs. All sponsors were to be acknowledged in all outputs and their logo will be displayed where possible. Tangible outputs have differed slightly from those outlined in relative magnitude and timing but we are confident that value for money has been obtained.

The following include outputs already attained and details of those planned:

A. Media Items:

The uptake of an initial press release in UK and internationally was limited. It is expected that uptake following press release following publication of technical publications will be better, however, the following items have appeared to date:

Radio Broadcast on *Radio Djan-Djan* by Paulo in the Bijagós Archipeligo in November 2001 (see below)

“West African Marine Turtles, Difficult to Protect” *Afrol News* 21st May 2002

<http://www.afrol.com/news/2002/wa005_seaturtles.htm>

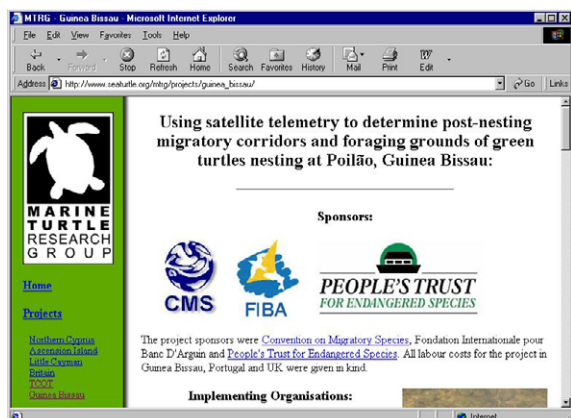

“Turtle Conservation in West Africa” *PTES News* Summer 2002

“Guine-Bissau – Primeiros Passos – Tartarugas da Paz” *National Geographic* (Portuguese Edition) November 2002.

“Tracking West African Turtles” to appear in future edition of *CMS Bulletin*

B. Web Site:

The project web site is located at < http://www.seaturtle.org/mtrg/projects/guinea_bissau/>. It has been visited 954 times as of April 1 2003.

C. Presentations:

We have disseminated the results of this project at scientific meetings, with full acknowledgement of sponsors and will do more of this when the scientific data have been published. To date four presentations have been made:

Godley BJ. (2001). “Marine Turtle Research at the University of Wales Swansea” Presented at the Institute of Biology, Aberystwyth, December 2001.

Godley BJ (2002). “Tracking Marine Turtles by Satellite.” Presented as part of Bermuda Turtle Project Annual Training Course in Marine Turtle Biology and Conservation, August 2002.

Barbosa C (2002) “Satellite Telemetry of Green Turtles from Poilão, Guinea Bissau: Preliminary Results” Presented at the First Meeting of the Signatory States to the Memorandum of Understanding Concerning Conservation Matters for Marine Turtles of the Atlantic Coast of Africa.

Godley BJ (2003) “Satellite Telemetry of Green Turtles from Poilão, Guinea Bissau.” Presented at the Annual Sea Turtle Symposium, Kuala Lumpur, March 2003

D. Final Technical Report.

This report will be produced and distributed widely regionally and internationally.

E. Scientific Publications:

It is envisioned that this work will result in two high impact scientific publications, which are expected to be completed and submitted in the next few months. Reprints will be circulated widely in hardcopy and .pdf format. MTRG maintains a policy of free reprint distribution.
